The rights of children for study in municipal sport schools

The article is about the legislative regulation of children's right to studying in additional educational institutions (sports schools). The author of the article uses state education acts to prove that children's right to education in municipal sports schools are satisfied.

A. S. Kuznetsov, F. N. Kiyamov

Basic-technical training methods in sport wrestling on belts

Popularity of sport wrestling on belts forces experts to search for ways of training process quality improvement. In the given article one of these ways a technique of perfection due basic technical training is offered. The author considers to begin training with basic throws as the most accessible and frequently competition used in different conditions. Development of throws is built by a principle of concentric (circular) training. When training we recommend to use the terminology based on spatial and biomechanical attributes for formation of optimum impellent installation.

A. I. Ivanov

Peculiarities of swimming technique for underwater swimmers of various qualifications

Three factors defining efficiency of movements while swimming are determined on the basis of conducted research. These are: speed and force potential of their efforts doing stroke movements, and ability not to change the gliding position of the body doing stroke movements.

Sh. R. Zainullin, Z. M. Kuznetsova, F. A. Shemuratov

Intensification of physical and technical-tactical training of 15–18 aged boxers-beginners

This article brings results of universal effective application speed-force equipment «heyvus» research of 15 – 18 aged boxers-beginners aimed at intensification of their technical-tactical training.

V. I. Kozhevnikov, I. A. Sidorenko

A lesson of gymnastics in 6–7-th classes of school using Khatkha-yoga dynamic exercises

This article represents the results of investigation of (vinyas) Khatkha-yoga dynamic exercises influence on physical preparation of pupils at the age of 11 – 13 and increase of physical activity of the lesson.

TEACHING METHODOLOGY

M. N. Arkhipova

Increasing of educational students' activity in mathematical and computer courses is one of the conditions of forming readiness in using information during the process of making decisions in the sphere of management

There are some tasks analyzed in the article which should be decided during the mathematical training of economists. In this article it is formed the opportunity of activation students' mode of thinking by means of different technologies in organizing their independence and initiative during the educational activity, and also their practical application with educational information.

N. A. Nastashchuk

Intellectual information technologies in economics and management

It is discovered the particular feature of using of intellectual information technologies in economics and management. The application of the methods of knowledge presentation allows to synthesize and systematize economics information in the conditions of rapidly changing market situation and inculcation of innovations for making management decisions.

M. V. Larionov

Experimental abilities as an aspect of information competence of the future specialist

The search of information for professional tasks solution is made by empirical methods and by ICT. Formation of experimental abilities is as the most important aspect of information competition of modern specialist represents the actual pedagogical task in professional education. In the article different ways of it solution are observed.

G. G. Babalova

Communication of «human being – computer» and information-search systems

The regime of interaction between a human being and a computer is used in different automated information systems. There are three types of

management systems: automated system of planned calculations, automated system of management and the system of automated projecting. Of primary importance is the integration of these systems, i. e. the provision of their coordinated functioning on the basis of information exchange. At present there are three main concepts in information banks creation: banks of documents, data banks and knowledge-based banks. Any information language is terminological, that is why the central applied task is compiling a correct scientific terminological summary.

G. A. Lanchshikova

Criteria of grade and developments pattern of elementary-years students competence in domain of spatial constructions in process of education of discipline called Perspective.

This article considers matter of education of spatial constructions of students, that studying at art faculty, in sense of totality knowledge, experience of practical and creative activity, as well as motivational-reflexive perception and appraisal of educational activity. These descriptions unite in criteria shares conditionally: motivational, cognitive, technological, variative and reflexive shares. This article includes graphic presentation of developments pattern of student's competence in domain of spatial constructions. These articles sources might be used in science and research work with secondary schools pupils, with art schools students, as well as special classes of general educations school.

G. G. Babalova, V. P. Pustobaev

Tendencies and perspectives of computerized lexicography

The evident tendency in modern lexicography is the development of computer dictionaries compiling. The computer lexicography is the special trend with its own approaches not only in respect to representation, but to the contents of dictionaries. Of great use should be the following theories: the notion «lexical function», the description of semantics and practical realization of grammar in word-changing and word-building; syntactical structure of entries. The future lexicography should deal with integral description of entries taking into account the results of lexicographers' research work.

S. L. Orlova

Training of a mathematics teacher at professional development courses to designing the purposes and contents of training process in the context of the competence approach

The study of bases of the competence approach has allowed to allocate models of education, which are considered as a context of the competence education.

The tasks are formulated and the contents of preparation of the mathematics teacher to designing of training process in a context of the competence approach are developed.

S. P. Bereberdina

The educational conditions of the informational and professional culture of the future manager

Taking into consideration the training informational complex on mathematics as a model of the formation of the informational and professional culture of a future manager, it is necessary to pick out some educational conditions, improving the efficiency of this model fundamentally: the application of Portfolio method, providing the natively – stimulating accompanying of this process and the purposeful formation of skills in «the way of the system analysis of the subject field and its solution by means of the universal informational computer technology.

A. Sh. Amirzhanova

Principal approaches to the concept definition of «creative art work»

The meaning of creative kinds of human activity is analyzed in the current article; the definitions of «art creativity», «creative art work», «art», and «image» are dealt with in more detail in pedagogical, philosophical and psychological aspects. It has been carried out the arrangement of available material, picked out the most valuable for the theme aspects, classifications and definitions.

CULTUROLOGY. ART HISTORY

O. V. Yarosh

Goethe's ideas in the context of musical science

The article deals with some Goethe's discoveries in the field of natural science in the context of modern musicology. Their study proves that Goethe's views on the universe and development of natural phenomena are in keeping with the methods widely used in contemporary musical science.

Dairabaeva A.A.

The traditional ornamental art of Kazakh in Western Siberia in XX – at the beginning of XXI century

Some questions connected with study of ornamental art of Kazakh in Western Siberia in XX – at the beginning of XXI century are considered in this article. There is a description of this ethnic group and its interrelations with other nations, these relations reflected in ornamental furnishings subject both Kazakhs of West Siberia, and populations, which had interacted with them. The most typical ornaments with attempt of the interpretation separate pattern.

Стипендиальная программа (Reagan-Fascell Democracy Fellows Program)

Национальный фонд поддержки демократии (National Endowment for Democracy)

Стипендиальная программа Рейгана-Фэшела организована Национальной организацией поддержки демократии (США). В рамках данной программы предоставляется возможность активным участникам политической жизни страны, борцам за права человека, журналистам разных стран, ученым-политологам углубить знания о процессах демократизации и использовать полученные знания и опыт в дальнейшей деятельности, способствуя демократическим переменам в своих странах. В рамках программы предлагаются два курса — практический и теоретический (академический).

Практический курс организован для активистов-демократов, борцов за права человека, журналистов. Им предоставляется возможность ознакомиться с опытом их коллег-демократов из США. Полученный опыт дает возможность участникам программы сопоставить демократические процессы в США с процессом построения демократического общества в их родной стране. Продолжительность практического курса невелика — обычно 5 месяцев.

Теоретический (академический) курс предназначен для ученых из стран «новой демократии». Для участия в программе необходимо наличие ученой степени (PhD или ее эквивалент) на момент подачи заявления. Продолжительность академического курса — от 5 до 10 месяцев. Программа длится с 1 октября по 31 июля, семестры начинаются в октябре и в марте. Каждый участник программы получает ежемесячную стипендию, медицинскую страховку, компенсируются транспортные расходы.

Требования к участникам. Стипендиальная программа создана в первую очередь для поддержки активистов и ученых-теоретиков из стран с развивающейся демократией, но в ней также могут участвовать и ученые из Соединенных Штатов Америки и других развитых стран. Для участников практического курса нет специфических требований. Необходим опыт практического участия в различных аспектах политической жизни страны — борьба за права человека, участие в деятельности политической партии и т.д. Для участия в академическом курсе необходимо иметь степень кандидата наук или доктора наук.

Формы для подачи заявок представлены на сайте [The National Endowment for Democracy \(NED\)](http://www.ned.org). Ближайший крайний срок подачи заявок — **3 ноября 2008 года**. Уведомления об участии в программе рассылаются в апреле 2009 года.
